How does it work?

The Importance of Collagen

Collagen is a protein that makes your skin firm and elastic. The natural aging process can diminish collagen.

The Use of Radio Frequency Energy

Many people search for an effective and long-lasting way to combat the signs of aging without surgery. You can naturally stimulate and rebuild your body's own collagen using radio frequency energy.

Did you know?

Collagen regeneration with radio frequency energy is well studied and has been used in aesthetic treatments since 2002.

How ThermiVa Works

Thermiva is a quick, non-invasive, non-ablative Women's Wellness treatment that uses radio frequency (RF) energy to gently heat tissue in your smaller, secluded areas.

The RF energy naturally stimulates your body's own collagen... without using surgery, anesthesia, or hormones.

What to expect

A safe, gentle, non-invasive option for Women's Health & Wellness.

- Warm energy is applied to gently deliver heat, at your comfort level
- Many patients describe this feeling as similar to "a warm massage"
- The RF energy naturally stimulates collagen
- No vapors or smoke
- No anesthesia or numbing cream
- Each treatment takes on average, 30 minutes
- 3 in-office treatment sessions recommended
- Results can last up to 12 months

Why choose ThermiVa?

Because surgery, lasers, and hormones may not be for everyone. ThermiVa offers...

No downtime.
Most women may resume normal and daily activities immediately.

Minimal side effects.
ThermiVa uses patented technology that is proven safe.

Real-time results.
Many women feel and see differences right away!
