

A simple, non-invasive approach to smoother, refreshed-looking skin.

WHAT IS THERMISMOOTH?

ThermiSmooth is a non-invasive treatment that uses gentle, temperature-controlled radiofrequency to heat targeted tissue beneath the skin. This process supports collagen and helps improve the appearance of smoother, more refreshed-looking skin.

WHAT DOES IT HELP WITH?

Over time, your skin can begin to show changes in texture, tone, and elasticity. ThermiSmooth is designed to help improve the appearance of fine lines, uneven texture, and mild skin laxity, leaving your skin looking smoother and more refined.

30 Min or Less

Quick, in-office sessions

No Downtime

Return to activities right away

Comfortable

Warm, relaxing experience

Natural Results

Gradual, lasting improvement

Why You'll Love It

ThermiSmooth treatments are comfortable and often described as a warm, relaxing experience. Because the treatment is non-invasive, there is little to no downtime, allowing you to return to your normal activities right away. Sessions are quick and easy to fit into your routine.

Is It Right for You?

ThermiSmooth is a great option if you're looking for a simple, non-surgical way to support your skin and feel more confident in your appearance. It is ideal if you prefer gradual, natural-looking results without downtime.

WHAT TO EXPECT

1

In-Office Treatment

Sessions take 30 minutes or less depending on the area being treated.

2

Series of Three

Optimal results with 3 treatments spaced 3 weeks apart.

3

Maintain Results

Maintenance every 6 months to support long-term improvement.
